## Building the Next Mid-tier Gold Company

TSX.V: MAI | OTCQX: MAIFF

## November 2024

## Forward Looking Statements

This presentation contains "forward-looking information" within the meaning of applicable Canadian securities laws. Forwardlooking information includes statements that use forwardlooking terminology such as "may", "could", "would", "will", "should", "intend", "target", "plan", "expect", "budget", "estimate", "forecast", "schedule", "anticipate", "believe", "continue", "potential", "view" or the negative or grammatical variation thereof or other variations thereof or comparable terminology. Such forward-looking information includes, without limitation, any statement that may predict, forecast, indicate or imply future plans, intentions, levels of activity, results, performance or achievements. Forward-looking information is based upon estimates and assumptions of management in light of management's experience and perception of trends, current conditions and expected developments, as well as other factors that management believes to be relevant and reasonable in the circumstances, as of the date of this presentation. While Minera Alamos Inc. ("Minera Alamos" or the "Corporation") considers these assumptions to be reasonable, the assumptions are inherently subject to significant business, social, economic, political, regulatory, competitive and other risks and uncertainties, contingencies and other factors that could cause actual actions, events, conditions, results, performance or achievements to be materially different from those projected in the forward-looking information. Many assumptions are based on factors and events that are not within the control of the Corporation and there is no assurance they will prove to be correct.

Forward-looking information involves known and unknown risks, uncertainties and other factors, and does not guarantee future performance. See the risk factors described in the "Risk Factors" section of the Corporation's annual management

discussion and analysis dated December 31, 2023 (the "MD&A") for a discussion of certain risk factors investors should carefully consider before deciding to invest in securities of the Corporation. The MD&A is available on SEDAR+ at www.sedarplus.ca. Although the Corporation has attempted to identify important factors that could cause actual actions, events, conditions, results, performance or achievements to differ materially from those described in forward-looking information, there may be other factors that cause actions, events, conditions, results, performance or achievements to differ from those anticipated, estimated or intended. There can be no assurance that forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Accordingly, readers should not place undue reliance on forward-looking information. Forward-looking information contained herein is made as of the date of this presentation or as of the date indicated, and the Corporation disclaims any obligation to update or revise any forward-looking information, whether as a result of new information, future events or results or otherwise, except as and to the extent required by applicable securities laws in Canada. Minera Alamos expressly disclaims any obligation to update or revise any such forward-looking statements.

The scientific and technical information in this presentation is derived from the following technical reports prepared in accordance with National Instrument 43-101 – Standards of Disclosure for Mineral Projects ("NI 43-101") by the following "qualified persons" (as such term is defined in NI 43-101) : (i) NI 43-101 Technical Report titled "Mineral Resource Update and Preliminary Economic Assessment of the La Fortuna Gold Project, Durango State, Mexico" by CSA Global, dated July 13, projections being provided.

#### TSX.V: MAI | OTCQX: MAIFF | mineraalamos.com

2018; (ii) NI 43-101 Technical Report titled "Preliminary Economic Assessment and Mineral Resource Estimate for the Cerro de Oro Project" dated Jan 5th, 2023; (iii) NI43-101 Technical Report titled "Mineral Resource Estimate for the Santana Project, Sonora, Mexico" dated October 16th, 2023; (iv) NI43-101 Technical Report titled "Los Verdes Cu/Mo Project – Preliminary Economic Assessment" prepared by Golder Associates Ltd for Virgin Metals Ltd and dated May 2012; and Sabre Gold Mines Corp NI-43-101 Technical report titled "Preliminary Economic Assessment for the Copperstone Project, La Paz County, Arizona, US" prepared by Hard Rock Consulting LLC and dated June 2023.

The Preliminary Economic Assessments (PEA) discussed in this presentation are preliminary in nature, include inferred mineral resources. Inferred mineral resources are subject to uncertainty as to their existence and as to their economic and legal feasibility. The level of geological uncertainty associated with an inferred mineral resource is too high to apply relevant technical and economic factors likely to influence the prospects of economic extraction in a manner useful for evaluation of

economic viability. There is no certainty that the preliminary economic assessment will be realized. Economic studies will need to be completed prior to accurate guidance and projections being provided.

This presentation includes market, industry and economic data which was obtained from various publicly available sources and other sources believed by the Corporation to be true. Although the Corporation believes it to be reliable, the Corporation has not independently verified any of the data from third party sources referred to in this presentation or analyzed or verified the underlying reports relied upon or referred to by such sources or ascertained the underlying economic and other assumptions relied upon by such sources. The Corporation believes that its market, industry and economic data is accurate and that its estimates and assumptions are reasonable, but there can be no assurance as to the accuracy or completeness thereof. The accuracy and completeness of the market, industry and economic data used throughout this presentation are not guaranteed and the Corporation does not make any representation as to the accuracy or completeness of such information.

The scientific and technical information contained in this presentation has been prepared or reviewed and approved by Darren Koningen, P. Eng., President of Minera Alamos who is a Qualified Person (within the meaning of National Instrument 43-101). To the best of knowledge, information and belief of Minera Alamos, there is no new material scientific or technical information that would make the disclosure of the mineral resources or other scientific and technical information set out in this presentation to be inaccurate or misleading.

For further information on the technical data provided in this presentation, including the key assumptions underlying the mineral resource herein, data verification, quality assurance program, quality control measures applied, risks and uncertainties please refer to the SEDAR filings of Minera Alamos or Sabre Gold, as the case may be.

This presentation is not for distribution to United State newswire services and not for dissemination in the United States. The securities discussed herein have not been and will not be registered under the United States Securities Act of 1933 (the "US Securities Act"), as amended, or the securities laws of any state and may not be offered or sold in the United States or to US persons (as defined in Regulation S of the US Securities Act) unless an exemption from registration is available

## Why Invest in Minera Alamos?

TSX.V: MAI | OTCQX: MAIFF | mineraalamos.com

#### We are proven builders

- Heap leach and Underground mining expertise
- Extensive Mineral Processing experience
- Ability to expedite projects & minimize initial CAPEX
- Same team that placed 4 mines into production

#### We are gold producers

- 1<sup>st</sup> mining operation in production
- 2<sup>nd</sup> planned mine in permitting stages (2022 PEA)
- 3<sup>rd</sup> planned mine in advanced mine stage permitting process pending construction decision (2023 PEA)
- 4<sup>th</sup> planned mine with permits awaiting resource expansion prior to construction decision

#### We are minimizing risk

- Focus on Maintaining a Strong balance sheet
- Funding package already secured for next planned mine (Cerro de Oro)

#### We have growth potential

- Multi-mine strategy
- Potential for expansion via exploration success
- Copper developer spinout

#### We are largely insulated from inflation

- Low capital intensity projects better insulated

## Transaction Summary

Proposed Transaction	<ul> <li>Minera Alamos to acquire Sabre Gold Mines Corp. ("Sab</li> <li>Pro forma ownership: ~86% Minera Alamos / 14% Sabre</li> </ul>
Consideration	• 0.693 Minera Alamos shares per common share of Sab
Conditions	<ul> <li>Sabre to settle ~C\$9.4M of debts outstanding prior to the assed on the exchange ratio, settlement implies a Marcholder shareholder vote (66<sup>2</sup>/<sub>3</sub>% of shareholder votes case)</li> <li>Court approval, regulatory approval and certain other of the statement of the stateme</li></ul>
Timing	Sabre shareholder meeting and closing of the Transact

<sup>1</sup> After taking into account Sabre debt settlement prior to the effective time

abre") via a Plan of Arrangement pre<sup>1</sup>

bre

the effective time of the Transaction at 85% of face value Minera Alamos share price of ~C\$0.45 on Oct 25<sup>th</sup> Close ast and simple majority of minority)

ction expected to take place in January 2025

## Sabre Gold Transaction Highlights

- Acquisition of Past Producing Copperstone Mine Historic production of 514k oz gold  $\checkmark$ 
  - Potential for near-term mine restart with existing infrastructure. Permitted Plan of Operations in place for the mine
- **Creation of a Diversified North American Gold Producer Platform** 
  - Beyond the Santana gold mine, visibility to an additional +150koz<sup>1</sup> of potential annual gold production in premier mining \_ jurisdictions in North America
- **Accelerating Copperstone Back into Production**  $\checkmark$ 
  - Minera Alamos' in-house mine building expertise combined with its previously acquired process plant equipment will \_ allow for significant reductions in capital costs and operation restart times in this very strong gold price environment

#### **Creditor Support** $\checkmark$

Transaction supported by Creditors – elimination of approximately \$9.4 million of debt at a 15% discount to its face value.

1 – Based on the NI-43101 PEA's for the Copperstone, Cerro de Oro and La Fortuna projects and the potentia production profile for each project as described therein

## **Relative Contribution**

### **Accretive on Key Metrics**

Sabre Minera Alamos

Notes:

1. "Net Asset Value" is based on Minera Alamos consensus NAV and Copperstone Project after-tax NPV (5%) at \$2,000/oz Au. See Copperstone 2023 PEA (National Instrument 43-101 Technical Report: Preliminary Economic Assessment for the Copperstone Project, La Paz County, Arizona, USA (June 26, 2023) authored by J.J. Brown P.G. et al on Sabre's SEDAR+ profile).

## **Mutual Shareholder Benefits**

#### **Benefits to Minera Alamos Shareholders**

Addition of a permitted, high-grade, near-term producing Immediate and attractive premium to Sabre shareholders asset in the United States

ullet

ullet

- Strengthens portfolio and positions Minera Alamos to execute on its strategy of low capex producing assets
- Management ideally positioned to unlock the value of Copperstone, leveraging systems, equipment and expertise to accelerate development timeline
- Provides asset diversification and improves Minera Alamos' production and cash flow profile
- Creates a regional platform to continue to develop
- Meaningful revaluation potential

TSX.V: MAI | OTCQX: MAIFF | mineraalamos.com

- Meaningful ownership in an established gold producer with continued exposure to Copperstone
- Diversifying exposure from a single asset developer to a portfolio of assets including one currently in production and one awaiting permits
- Partnership with experienced mine operators in North America with a proven history of bringing projects into production while minimizing capital requirements
- Increased trading liquidity, enhanced value proposition and capital markets presence
- Meaningful revaluation potential lacksquare

#### **Benefits to Sabre Shareholders**

## **Potential Production and Resource Growth**

## Production Growth<sup>1</sup>

- Incremental ~40,000 oz/y of planned production
- Complementary low capital intensity project to existing Mexican platform
- 2023 PEA envisions US\$1,305/oz AISC in \$2,000 gold environment
- Initial 6-year mine life with exploration upside
- US\$25,000,000 of previous investment in underground development and surface infrastructure

Notes:

#### TSX.V: MAI | OTCQX: MAIFF | mineraalamos.com

### **Resource** Growth<sup>1</sup>

 Approximate 35% increase in Minera Alamos' total gold resource inventory to almost 1,900,000 ounces. Combined gold inventory at its' projects will comprise, on completion of the acquisition; 499,000 oz of Measured Resources, 308,600 of Indicated Resources and 1,090,000 oz of Inferred Resources.

 60% increase in Measured and Indicated resources to approximately 800,000 oz

 Acquisition cost of approximately US\$43/oz based on M&I&I resources that comprise 196,000 oz of Measured, 104,000 oz of Indicated and 197,000 oz of Inferred.

<sup>1.</sup> See – (i) NI 43-101 Technical Report titled "Mineral Resource Update and Preliminary Economic Assessment of the La Fortuna Gold Project, Durango State, Mexico" by CSA Global, dated July 13, 2018; (ii) NI 43-101 Technical Report titled "Preliminary Economic Assessment and Mineral Resource Estimate for the Cerro de Oro Project" dated Jan 5th, 2023; (iii) NI43-101 Technical Report titled "Mineral Resource Estimate for the Santana Project, Sonora, Mexico" dated October 16th, 2023 and (iv) and Sabre Gold Mines Corp NI-43-101 Technical report titled "Preliminary Economic Assessment for the Copperstone Project, La Paz County, Arizona, US" prepared by Hard Rock Consulting LLC and dated June 2023.

## Increased Exposure to Tier 1 Jurisdictions

#### **Asset NPV by Geography**<sup>1</sup>

<sup>1</sup> Copperstone Project after-tax NPV (5%) at \$2,000/oz Au based on Copperstone 2023 PEA. Minera Alamos NPVs based on select analyst reports.

#### TSX.V: MAI | OTCQX: MAIFF | mineraalamos.com

#### **M&I Resources by Geography**

### **Copperstone Mine** Arizona, U.S.

The Copperstone project encompasses approximately 13.8 square miles of surface area and mineral rights in La Paz County, Arizona. The project is wholly held by Sabre Gold, which controls the 546 federal unpatented mining claims comprise the Copperstone project area.

Prior production at Copperstone included open pit mining with 2,500 tpd of combined whole ore and heap leaching from 1987 to 1993 resulting in a total reported production of 514,000 oz of gold from 5,600,000 tons of ore grading 0.089 oz/t (2.8 g/t) of gold. In 2011, a 450 tpd floatation mill was built on site and in 2012 underground mining commenced from two declines that were previously developed in the bottom of the open pit. Operations took place from January 2012 to July 2013 until production was suspended in a declining gold price environment.

Plan of Operation permitted for a production increase to 600 tpd.

## **Copperstone Mine Overview**

### PEA

- The recent 2023 Preliminary Economic Assessment (PEA) provides a revised start-up mine plan (initial 6 years of production) for the Copperstone project, including revised resource estimates, mining methods, mining dilution and recovery assumptions.
- 160,000 m of drilling incorporated into resource estimate

#### Infrastructure

 Significant site infrastructure, including preexisting tailings and processing facilities, utilities at site (power and water) and rehabilitated underground development allow for reduced upfront construction cost and low initial capital per payable gold ounce produced over the life of the mine. A significant portion of the existing onsite infrastructure is in good repair and available for the restart of site operations.

## **Copperstone 2023 PEA Summary**

After-Tax	\$1800/oz Au	\$2000/oz Au
NPV (5%)	US\$61.8 million	US\$89.3 million
IRR	50.5%	71.1%
Payback Period	1.8 years	1.3 years
Summary		
Ave. Annual Production	40,000 oz gold	40,000 oz gold
Pre-Production Capital	US\$36.3 million	US\$36.3 million
Sustaining Capital	US\$52.1 million	US\$52.1 million
LOM Average AISC	US\$1,286/oz	US\$1,305/oz
Initial Mine Life	6 years	6 years
Mining Rate	544 tpd	544 tpd
After-tax cumulative undiscounted free cash flow	US\$86.8 million	US\$121.7 million

Notes:

The full report, "National Instrument 43-101 Technical Report: Preliminary Economic Assessment for the Copperstone Project, La Paz County, Arizona, USA (June 26, 2023) authored by J.J. Brown P.G. et al is available for download from Sabre Gold's SEDARPlus profile or on their website at https://www.sabre.gold/sabre-gold/Copperstone\_PEA\_43-101.pdf

## **Copperstone Mine Overview**

#### Permitting

Permitting for the restart of mining operations is in place in addition to required water and surface rights. All facilities envisioned in the current PEA are located in "brownfields" locations such that no new surface disturbances are expected.
 Modifications required for the revised mine plan and flowsheet as a result of the PEA are at an advanced stage and will be addressed in the coming months as project finance discussions are finalized.

#### Exploration

 A number of additional targets were identified for follow-up exploration in areas outside of the current resource where significant gold mineralization had been encountered. These include deep extensions to the currently planned mining areas as well as potential strike extensions in both directions laterally from the planned mining areas.

## **Copperstone Mine Overview**

#### Utilization of existing Minera owned Mill

- Relocation of a portion of the grinding and flotation equipment already owned by Minera Alamos to be utilized at the Copperstone project. This includes the major equipment items required for reactivation of the crushing, grinding, flotation and filtration facilities at the Copperstone site.
- Process plant equipment and infrastructure accounted for approximately 40% of the capital budget for restarting the project in the current 2023 PEA.
- The remainder of the existing equipment owned by Minera can be retained for eventual use at the Company's permitted La Fortuna project (2018 PEA)

## **Copperstone Resource Statement**

### Mineral Resource Estimate

<b>Resource Category</b>	Cut-Off Grade	Tonnes	Average Grade	<b>Contained Au</b>
(All Zones)	Au (g/t)	(t)	Au (g/t)	(oz)
Measured	3.15	750,000	8.12	196,000
Indicated	3.15	457,000	7.09	104,000
Total Measured and Indicated	3.15	1,207,000	7.74	300,000
Inferred	3.15	970,000	6.30	197,000

#### Notes:

• Mineral Resources have an effective date of February 15, 2023. The Qualified Person responsible for the Mineral Resource estimate is Mr. Richard A. Schwering, P.G., SME-RM, an employee of Hard Rock Consulting, LLC.

• Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability.

• Inferred mineral resources are that part of a mineral resource for which the grade or quality are estimated on the basis of limited geological evidence and sampling. Inferred mineral resources do not have demonstrated economic viability and may not be converted to a mineral reserve. It is reasonably expected that the majority of Inferred mineral resources could be upgraded to Indicated mineral resources with continued exploration.

• The mineral resource is reported at an underground mining cut-off of 0.092 oz/ton (3.15 g/t) Au beneath the historic open pit and within coherent wireframe models, and for estimated blocks which meet the criteria of a minable shape. The cut-off is based on the following assumptions: a gold price of \$1,800/oz; assumed mining cost of \$90/ton (\$99.21/tonne), process costs of \$47/ton (\$51.81/tonne), general and administrative and property/severance tax costs of \$15.00/ton (\$16.53/tonne), refining and shipping costs of \$12.00/oz, a metallurgical recovery for gold of 95%, and a 3.0% gross royalty.

• Rounding may result in apparent differences when summing tonnes, grade and contained metal content. Tonnage and grade measurements are in Metric units. Contained metal is reported as troy ounces.

## Growth Model

### Pushing Growth Along the Mineral Development Lifecycle

TSX.V: MAI | OTCQX: MAIFF | mineraalamos.com

- 8-year initial mine life
- In permitting
- Funding secured
- Upside Case

#### La Fortuna

- 5-year initial mine life
- All federal permits in place
- Construction Decision sequenced after CdO and Copperstone
- Growth Potential

## **Golden Foundations**

### Unveiling Strong Economics in Gold Mining<sup>1</sup>

#### TSX.V: MAI | OTCQX: MAIFF | mineraalamos.com

**10 M** Low Capex **Sub \$900/oz** Cash Costs in 2022

**28 M** Low Capex **\$873/02** AISC per 2022 PEA (\$1600 gold)

36 M Low Capex **\$1,305/oz** AISC per 2023 PEA (\$2000 gold)

**30 M** Low Capex **\$440/oz** AISC per 2018 PEA (\$1250 gold)

### Low-Cost, Low Capital Intensity Path to Intermediate Production

Source: Capital IQ; Corporate disclosure; Street research<sup>1</sup> Capital Intensity calculated as Initial Capex / Avg Annual Production<sup>2</sup> La Fortuna 2018 capex inflated by 40% to arrive at current estimated capital intensity shown above

## 2025 Outlook

### Flexible Sequencing – Preparing for dual track development

#### H1 2025 Current Expectations / Assumptions

- Cerro De Oro Permits
- Copperstone submit final documents for addition of leaching facilities to existing processing at site
- Rehabilitate and installation of larger mill equipment at Copperstone
- Santana Phase 3 Pad Amendment
- Minera Copper acquisition of 3<sup>rd</sup> Project and Go-Public Planning
- Restructuring current lending packages to support Cerro de Oro and Copperstone dual track development

#### H2 2025 Current Expectations / Assumptions

- Cerro De Oro Construction Decision completion approximately 2025 YE forward run-rate of 60,000 oz/y<sup>1</sup> per 2022 PEA
- Copperstone minor underground rehab, completion of mill installation, receipt of all documentation
- Copperstone completion late 2025 forward run-rate of 40,000 oz/y<sup>2</sup> per 2023 PEA
- Copperstone mine start up decision
- Santana ramp-up with new pad capacity in place
- Minera Copper Go-Public

1 and 2. Cerro de Oro and Copperstone potential production profiles are taken from the respective PEA production schedules

### **Shareholder Distribution**

### Analyst Coverage

**NATIONAL BANK OF CANADA** 

### Desjardins

## **Board of Directors / Operating Team**

### **Rich Diversity of Technical Expertise**

#### Darren Koningen P.Eng. **CEO**, Director

30 years of engineering/ metallurgical experience, led El Castillo project at Castle Gold (later sold to Argonaut), and successfully managed on-time, under-budget construction and operation of two gold heap leach projects in Mexico.

#### **Doug Ramshaw B.Sc. Mining Geology President**, **Director**

30 years in mineral resources, former mining analyst, senior executive in exploration companies, expertise in project evaluation, M&A, and business development. Former Director of Great Bear Resource, acquired for \$1.8 billion.

#### Kevin Small P.Eng. **Independent Director**

35 years in mining industry, led operations and start-up projects. Former President and CEO of Jerritt Canyon Gold (Sprott Mining Inc.) and ex-

Director of Mine Operations at Beta Hunt mine (Karora Resources Inc.) in Western Australia.

### **Proven Construction, Commissioning and Operations Experience**

#### Janet O'Donnell

#### CFO

30+ years of financial management experience, largely within the mining sector. Formerly CFO of Castle Gold Corporation, a Mexican gold producer, overseeing El Castillo gold mine before its acquisition by Argonaut Gold.

#### **Federico Alvarez** M.Eng. **COO**

40+ years in Mexican academia, government, and mining. Former VP Operations for Argonaut Gold and Castle Gold at El Castillo gold mine in Durango. A decade as Director of Mining Affairs for Guanajuato State.

#### **Carolina Salas** M.Sc. Metallurgy **VP Technical Services**

20+ years in design, construction, operation, metallurgy, and maintenance at various Mexican project sites, including six years at Peñoles. Managed gold processing at Lluvia de Oro in Sonora.

#### Miguel Cardona P. Eng. **VP** Exploration

35+ years as a geological engineer in mineral exploration, underground, and open-pit mining. Spearheaded a threefold increase in El Castillo's gold resource for Castle Gold, from 400 Koz to 1.2 Moz.

#### **Ruben Padilla** P.Geo. Independent Director

35 years in diverse mining and exploration in the Americas. Former Exploration Country Manager (Peru, Colombia) and Chief Geologist at AngloGold Ashanti. Currently, Chief Geologist at Talisker Exploration Services Inc.

#### **Bruce Durham** P.Geo. **Independent Director**

40+ years experience in mining and exploration industry and was a member/leader of various exploration teams credited with the discovery of several mines in the Hemlo and Timmins areas.

#### **Chris Sharpe** P.Eng. **VP Project Development**

20+ years of engineering experience, Previously with Centerra Gold. Former senior mining engineer at AuRico Gold and Wardrop Engineering.

#### Victoria Vargas **MBA**. Finance **VP Investor Relations**

25+ years in mining, she started at Kinross Gold Corporation and joined Alamos Gold Inc. in 2004. Led initiatives to boost investor exposure and successfully upgraded the company from TSX Venture to TSX.

Hermosillo

### Santana Project 100% Owned, Sonora State

**June 2021** 

Mining operations commenced

#### Nov 2021

First gold production announced

2023

Permit amendments submitted to triple pad capacity for next phase

#### 2024

Return to target production levels in advance of next phase of heap leach expansion

#### Sonora State

## Santana Mine Expansion

#### Mining

– Direct mining cash costs of C\$1180/oz in 2022

#### Leaching

 Leach kinetics continue to track very favourably, with areas under active leach achieving 70% recoveries in 30-45 days and increasing

#### Outlook

- Main Nicho pipe is pre-stripped and now available to increase mining rates
- Slow 2023 production as a result of advancing waste mining activities and awaiting permit amendment for next phase of pad expansion
- Return to target production levels in advance of next phase of heap leach expansion
- Upwards of 25,000 oz to be mined as part of new operations plan over a 12-month schedule

## Santana Resource Statement

### Mineral Resource Estimate

<b>Resource Category</b>	<b>Cut-Off Grade</b>	Tonnes	Average Grade	<b>Contained Au</b>
(All Zones)	Au (g/t)	(t)	Au (g/t)	(oz)
Measured	0.15	6,540,000	0.65	136,000
Indicated	0.15	3,070,000	0.64	62,000
Total Measured and Indicated	0.15	9,610,000	0.65	198,000
Inferred	0.15	5,510,000	0.58	103,000

#### Notes:

- The independent QP for the mineral resource estimates, as defined by NI 43-101, is Scott Zelligan, P.Geo. The effective date of the 2023 mineral resource estimate is May 31, 2023.
- A gold price of \$1,700/oz was used in calculating the Mineral Resources.
- The estimate is reported for a potential open pit/heap leach scenario.
- The limits of the Resource-constraining pit shell assumed a mining cut-off based on a total operating cost (mining, milling, and general and administrative [G&A]) of \$12.00/t stacked, a metallurgical recovery of 75%, and a constant open pit slope angle of 40°. This constraining pit shell contained a total volume of 49 Mt (mineralized + unmineralized) implying a strip ratio of approximately 2.25. The gold cut-off grade applied to mineralized material is 0.15 g/t Au
- These Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability.
- The Mineral Resource estimate follows CIM Definition Standards. Results are presented in-situ. Ounce (troy) = metric tonnes x grade / 31.1035. Calculations used -metric units (metres, tonnes, g/t). Rounding followed the recommendations as per NI 43-101.
- The number of tonnes has been rounded to the nearest ten thousand.
- The QPs of the Report are not aware of any known environmental, permitting, legal, title-related, taxation, socio-political, marketing, or other relevant issues that could materially affect the Mineral Resource estimate.

## Сегго De Ого

### 100% Owned (No Royalties), Zacatecas State

### Cerro de Oro – Minera's Next Mine **Economic Key Highlights**

#### **Production**

- 8+ year initial mine life
- Average annual gold production of ~60,000oz
- Life of Mine AISC of \$873/oz \_
- 0.3:1 Strip ratio
- US\$28 M Capex including 30% contingency

#### Low Capital Intensity

- Recent Santana build informs capital costs; In-house fabrication of carbon plant
- Used crushing system previously bought further reduces upfront capital requirements.

#### **Exploration Upside**

- Open in various directions and depths. Expansion and metallurgical drilling set for 2025 (4,000– 5,000 m).
- Potential incorporation of transitional and sulphide mineralization pending further metallurgical testing.

## Cerro de Oro PEA Summary

After-Tax	
NPV (5%)	US\$150.5 million
IRR	111%
Payback Period	11 months
Summary	
Ave. Annual Production	58,400 oz gold
Pre-Production Capital	US\$28 million (including 30% contingency)
Sustaining Capital	US\$14.7 million
LOM Average AISC	US\$873/oz
Mine	8.2 years
Mining Rate	20,000 tpd
LOM Grade & Recovery	0.37 g/t Au (68% recovery)
LOM Strip Ratio	0.3:1 (waste to mineral)
Gold Price	US\$1,600/oz
FX Rate (MXP/US\$)	20

#### Notes:

1. "AISC per ounce" is a non-GAAP financial performance measure with no standardized definition under IFRS.

2. Base case price for gold was assessed using long term consensus pricing factoring in a modest discount against the average of available bank and brokerage firm estimates.

3. Life-of-Mine Averages exclude partial production in year 9

4. LOM average combined grade of run-of-mine ("ROM") and crushed material sent to leach pads Cerro de Oro PEA Economic Summary PEA Cautionary Note: Readers are cautioned that the PEA is preliminary in nature and there is no certainty that the PEA results will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. Additional work is needed to upgrade these mineral resources to mineral reserves.

### Cerro De Oro – Minera's Next Mine Updated Resource Statement

#### **Mineral Resource Estimate**

<b>Resource Category</b>	Cut-Off Grade	Tonnes	Average Grade	<b>Contained Au</b>
(Oxide Zone)	Au (g/t)	(t)	Au (g/t)	(oz)
Inferred	0.15	67,000,000	0.37	790,000

#### Notes:

- The independent and QP for the mineral resource estimates, as defined by NI 43 101, is Scott Zelligan, P.Geo. The effective date of the 2022 mineral resource estimate is September 28, 2022.
- A gold price of \$1,700/oz was used in calculating the Mineral Resources. \_
- The estimate is reported for a potential open pit/heap leach scenario.
- The limits of the Resource-constraining pit shell assumed a mining cut-off based on a total operating cost (mining, milling, and general and administrative [G&A]) of \$8.80/t stacked, a metallurgical recovery of 70%, and a constant open pit slope angle of 45°. \_ Inferred resources are too speculative geologically to have economic considerations applied to them.
- The gold cut-off grade applied to oxide mineralized material is 0.15 g/t Au \_
- These Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. \_
- The Mineral Resource estimate follows CIM Definition Standards. \_
- Results are presented in-situ. Ounce (troy) = metric tonnes x grade / 31.103. Calculations used metric units (metres, tonnes, g/t). Rounding followed the recommendations as per NI 43 101. \_
- The number of tonnes has been rounded to the nearest million. \_
- The QPs of this Report are not aware of any known environmental, permitting, legal, title-related, taxation, socio-political, marketing, or other relevant issues that could materially affect the Mineral Resource estimate other than those disclosed in this NI 43-101 compliant Technical Report.

### **Cerro de Oro** Funding Package Executed With Auramet

### Highlights Of Definitive Documentation\*

- \$15M Loan Facility
- US\$25 Million single source solution for initial construction capex (including 10% of modelled contingency) executed with Auramet
- Zero Equity Dilution
- US\$15 million loan facility
- US\$10 million royalty facility with significant buyback provisions

- 3-year term (PEA payback of least than 1 yr at \$1600 gold)
- 1.25% interest per month on any drawn amount (~15% cost of capital)
- US\$5 million drawdown has taken place, and the remaining US\$10 million can be drawn upon permit receipt
- Ability to refinance

\* With Auramet International and Auramet Capital Partners LP

### **\$10M** Royalty Package

ess	
-----	--

any capital) aken 10

- 2.75% NSR
- Available on receipt of permits
- Royalty buyback Minera can buy back 2% of the 2.75% NSR for a period of 30 months for US\$6.3 million plus up to 3200 oz of gold related to the NSR (a credit of 100oz of gold per full month of early repayment which incentivizes refinancing of the royalty package)
- Royalty holder has the option to sell the remaining 0.75% to Minera for US\$3.7 million

### La Fortuna Project 100% owned, Durango State

15

## La Fortuna PEA Economic Summary

After-Tax	
NPV (7.5%)	US\$69.8M
IRR	93%
Payback Period	11 months
Summary	
Average Annual Production	43k oz Au, 220K oz Ag 1,000 t Cu (50k oz AuEq)
Pre-Production Capital	US\$26.9M
LOM Average AISC	US\$440/oz
Mine	5 years
Mill Throughput (avg. tpd)	1,100
Mill Grade & Recovery	3.68 g/t Au (90% recovery)
Gold Price	US\$1,250/oz
Silver Price	US\$16/oz
Copper Price	\$5,725/tonne
FX Rate (CDN\$/US\$)	0.77

Notes: 1.AuEq–gold equivalent ounces. 2."AISC per ounce" is a non-GAAP financial performance measure with no standardized definition under IFRS. 3.Base case prices for gold, silver and copper were assessed at values approximately 2%7% below the 3 yeartrailing average prices for each of the metals and below the majority of the publicly available forward lookingestimates available as of July 2018. 4. Further details are provided in the Company's press release dated August 16, 2018. La Fortuna PEA Economic Summary PEA Cautionary Note: Readers are cautioned that the PEA is preliminary in nature and there is no certainty that the PEA results will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. Additional work is needed to upgrade these mineral resources to mineral reserves

### La Fortuna Exploration Potential

- Multiple zones of "La Fortuna-style" mineralization identified
- 2 Some alteration zones (e.g. PN Prospects area) are significantly greater in scale than those present at La Fortuna

No systematic exploration since 2008/09

Zone	Description	
Ramada	<ul> <li>Parallel fault structure ~2 km northeast of La Fortuna</li> <li>Traced at surface over 600 m of strike</li> <li>Historical drilling intersected 5.49 g/t Au and 204.8 g/t Ag over 2.2 m and 2.35 g/t Au and 17.6 g/t Ag over 3.3 m</li> </ul>	
PN Zone	<ul> <li>Traced on surface for ~1.5 km with numerous historic mine workings found along the structure</li> <li>Sampling grades of 1-10 g/t Au and 50-400 g/t Ag</li> </ul>	
Cerro Pelon	<ul> <li>Historical sampling has traced gold mineralization over an area of ~1,500 m long, 200-500 m wide with assay values as high as 10 g/t Au</li> </ul>	

Hermosillo

### Our Copper Assets 100% Owned, Sonora State

### "Minera Copper" Copper Capex Doesn't Have to Start With a "B"

#### Highlights

- Just north of the Santana gold project in Sonora, Mexico
- Adjacent to a major state highway leading to mineral concentrate ocean port facilities at Guaymas, Sonora
- 8-10 million tonnes of open pittable oxide resource potential at a grade of +1% CuEq
- Extensive metallurgical test work and basic engineering design completed for the construction of a twoproduct (copper and molybdenum) central flotation facility to process material from the surrounding deposits.
- PFS and PEA studies completed although being treated as historic in nature.

### "Minera Copper" Newly Acquired Suaqui Verde oxide copper project

#### Highlights

- 50km west of Los Verdes in Sonora, Mexico with excellent infrastructure
- 50-60 million tonnes grading 0.3% copper in various historical reports
- Over 100 historic drill holes \_
- Historical metallurgical work and engineering studies support the idea of developing Suaqui Verde as a traditional low capital intensity, open-pit/SX-EW (solvent extraction-electrowinning) copper project that would produce saleable copper metal cathode at site

### "Minera Copper" Copper Capex Doesn't Have to Start With a "B"

#### Discussions

- The Company is continuing discussions both internally and with interested parties to surface value for shareholders from existing copper assets within the Company's mineral property portfolio.
- Several complementary assets remain under review
- Funding plans will not divert resources from the gold business
- The operating team is being expanded to ensure appropriate management focus between copper and gold decisions
- Potential to spin out a new copper company once appropriately incubated

Cu/Mo Mineralization Buena Vista Fault
